Knowledge of the English language and its application in professional contexts

Soft Skill

Aptitude for teamwork.
Expertise in solving PC hardware and software problems with the tools at disposal.
High adaptability to stress and pressure.

Profile

I am a computer science student passionate about books, cinema and videogames.
My true passion is anything that combines creativity and technology at all its levels. I enjoy assembling fully customised PCs and mechanical keyboardsm since there is something deeply satisfying about seeing separate components becoming something functional and unique, with its own character.
I am curious by nature and i like to understand how various things work, not just superficially,therefore I am looking for varied of working experiences. Whether it's taking apart a device, reading technical documentation or programming a website, I always try to seek the balance between practicality and aesthetics.
